

Washington, D.C.

Weekly Weather and Crop Bulletin

Released August 4, 2009, by the National Agricultural Statistics Service (NASS), Agricultural Statistics Board, U.S. Department of Agriculture. For information on *Weekly Weather and Crop Bulletin* call Julie Schmidt at (202) 720-7621, office hours 7:30 a.m. to 4:00 p.m. ET.

National Weather Summary July 27 – August 2, 2009

The National Weather Summary was not available at press time. Please see the following website on Wednesday for the complete publication released by the World Agricultural Outlook Board (WAOB):

<http://usda.mannlib.cornell.edu/MannUsda/viewDocumentInfo.do?documentID=1393>

Agricultural Summary
July 27 – August 2, 2009

Highlights: Temperatures in the heart of the country were cooler than normal during the week, with recordings in the northern and central Great Plains as many as 11 degrees below average. In contrast, much of the western, southern, and eastern edges of the Nation experienced above average temperatures, with locations in Washington as many as 17 degrees above normal. Little to no rain fell west of the Rocky Mountains, in the northern Great Plains, or much of the Corn Belt. Conversely, a U-shaped band of storms delivered at least 1 inch of rainfall to the Rocky Mountains, the northern half of Texas, the Southeast, Tennessee Valley, and up the Atlantic Coast. Most notably, the Ark-La-Tex region received upwards of 9 inches of rainfall.

Corn: Silking advanced 21 points during the week reaching 76 percent complete by August 2, three points behind last year and 13 points behind the 5-year average. Acreage in Michigan and North Dakota reached the silking stage of development significantly behind last year and the 5-year average. Fourteen percent of the corn crop reached the dough stage by week's end, 1 point behind last year and 15 points behind the 5-year average. Some of the biggest delays were evident in Illinois and Indiana, where development was over 1 week behind normal. Sixty-eight percent of the corn crop was rated good to excellent, a 2 point decline from last week's condition rating.

Soybeans: Seventy-six percent of the soybean acreage was at or beyond the blooming stage, moving 13 points during the week. Soybean bloom was occurring at the same pace as last year's crop, but 10 points behind the average. Thirty-six percent of the crop reached the pod-setting stage during the week, the same pace as last year's crop, but 18 points behind the average. Soybean condition was rated 67 percent good to excellent by August 2, unchanged from last week.

Winter Wheat: Harvest of the winter wheat crop reached 85 percent complete, the same as last year, but 5 points behind the 5-year average. Michigan producers harvested 40 percent of their acreage during the week under ideal harvest conditions. In Montana and South Dakota, harvest lagged behind the normal pace for this time of the season by 38 and 25 points, respectively.

Cotton: Nationally, squaring was 94 percent complete, slightly ahead of last year and the 5-year average. Bolls were setting across 65 percent of the cotton crop, 2 points ahead of last year's boll-setting pace and 3 points behind the 5-year average. One-fifth or more of the acreage began to set bolls during the week in California, Missouri, Oklahoma, and Texas. Development lagged behind in most cotton-producing States, and remained more than 20 points behind in Alabama and Virginia. Condition of the crop improved 4 points from last week's rating.

Sorghum: Development of the sorghum crop to the heading stage was evident across 49 percent of the acreage, 2 points behind last year and 9 points behind the 5-year average. In Illinois, development was significantly behind at 16 percent headed compared with 70 percent for the 5-year average. Heading lagged the normal pace in Missouri, Nebraska, and South Dakota by more than 20 points, while in Arkansas, heading was nearly complete and slightly ahead of the usual pace. Coloring advanced just 2 percent during the week to 31 percent complete, slightly behind last year, but 1 point ahead of the 5-year average. The most crop development occurred in Louisiana, where 17 percent of the crop began coloring during the week, leaving the State's overall progress 12 points ahead of the 5-year average. Despite a significant jump in coloring in Arkansas, development remained 1 week behind the normal pace. Condition of the crop declined 2 points from last week.

Rice: Heading advanced to 41 percent complete by week's end, 2 points ahead of last year, but 12 points slower than the average. Progress was behind normal in all States except California and Texas. Due to the early season moisture in Missouri, heading in the State was well behind the 5-year average. Overall, 62 percent of the rice crop was rated in good to excellent condition, unchanged from a week ago.

Small Grains: Ninety-eight percent of the spring wheat crop was at or beyond the heading stage, 2 points behind last year and the 5-year average. Development in Idaho reached the heading stage across all acreage, joining South Dakota and Washington. Three percent of the spring wheat crop was harvested by week's end as producers in South Dakota and Washington gained harvest momentum ahead of schedule when compared with last year. However, harvest in all States lagged the 5-year average. Spring wheat condition declined 3 points from last week to 71 percent good and excellent.

Condition of the barley crop was rated 78 percent good to excellent, improving 1 point from last week's rating. Condition improvement was mostly attributed to a 7 point increase in the good to excellent ratings in Montana.

Nationwide, producers had harvested 31 percent of their oat crop by August 2, three points behind last year's pace and 20 points behind the 5-year average. Due to late planting, the pace trailed the 5-year average in all estimating States except Texas, and had yet to begin in North Dakota. Overall, 56 percent of the oat crop was rated in good to excellent condition, a 1 point improvement from a week ago.

Other Crops: Pegging advanced to 81 percent complete in this year's peanut crop, 7 points behind last year and 8 points behind the average. Despite the progress made during the week, significant delays were evident in Alabama, Florida, and Georgia, where crop development was over 1 week behind normal. Overall, 69 percent of the peanut crop was rated in good to excellent condition, improving 3 points from last week's rating.

Crop Progress and Condition Survey and Estimating Procedures

Survey Procedures: Crop progress and condition estimates are based on survey data collected each week from early April through the end of November. The non-probability crop progress and condition surveys include input from more than 5,000 reporters whose occupations provide them opportunities to make visual observations and frequently bring them in contact with farmers in their counties. Based on standard definitions, these reporters subjectively estimate progress of farmers' activities and progress of crops through various stages of development. They also provide subjective evaluations of crop conditions.

Most reporters complete their questionnaires on Friday or early Monday morning and submit them to the National Agricultural Statistics Service (NASS) Field Offices in their States by mail, telephone, fax, e-mail, or through a secured internet website. A small number of reports are completed on Thursday, Friday, Saturday, and Sunday. Regardless of when questionnaires are completed, reporters are asked to report for the week ending on Sunday. For reports submitted prior to the Sunday reference date, a degree of uncertainty is introduced by projections for weekend changes in progress and condition. By the end of the 2001 season, nearly two-thirds of the data were being submitted through the internet website. As a result, about one-half of all data are submitted on Monday morning, significantly reducing projection uncertainty.

Reporters are sent written reporting instructions at the beginning of each season and are contacted periodically to ensure proper reporting. Terms and definitions of crop stages and condition categories used as reporting guidelines are available on the NASS website at: www.nass.usda.gov/Publications/National_Crop_Progress/terms_definitions.asp.

Estimating Procedures: Reported data are reviewed for reasonableness and consistency by comparing with data reported the previous week and data reported in surrounding counties for the current week. Each State Field Office summarizes the reported data to district and State levels, weighting each county's reported data by NASS county acreage estimates. Summarized indications are compared with previous week estimates, and progress items are compared with earlier stages of development and historical averages to ensure reasonableness. Weather events and reporter comments are also taken into consideration. State estimates are submitted to the Agricultural Statistics Board (ASB) along with supporting comments, where they are compared with surrounding States and compiled into a National level summary by weighting each State by its acreage estimates.

Revision Policy: Progress and condition estimates in the *Crop Progress* report are released after 4:00 pm ET on the first business day of the week. These estimates are preliminary and subject to corrections or updates in the *Weekly Weather and Crop Bulletin* that is released after 12:00 pm ET on the second business day of the week. These estimates are subject to revision the following week.

Crop Progress and Condition tables expected next week:

Barley – Harvested, Condition
Corn – Silking, Dough, Dented, Condition
Cotton – Setting Bolls, Squaring, Bolls Opening, Condition
Oats – Harvested, Condition
Pasture & Range – Condition
Peanuts – Pegging, Condition
Rice – Headed, Condition
Sorghum – Headed, Coloring, Mature, Condition
Soybeans – Blooming, Setting Pods, Condition
Spring Wheat – Harvested, Condition
Winter Wheat – Harvested

ACCESS TO REPORTS!!

For your convenience, there are several ways to obtain NASS reports, data products, and services:

INTERNET ACCESS

All NASS reports are available free of charge. For free access, connect to the Internet and go to the NASS Home Page at: www.nass.usda.gov.

E-MAIL SUBSCRIPTION

All NASS reports are available by subscription free of charge direct to your e-mail address. Starting with the NASS Home Page at www.nass.usda.gov, under the right navigation, *Receive reports by Email*, click on **National** or **State**. Follow the instructions on the screen.

PRINTED REPORTS OR DATA PRODUCTS

CALL OUR TOLL-FREE ORDER DESK: 800-999-6779 (U.S. and Canada)
Other areas, please call 703-605-6220 FAX: 703-605-6900
(Visa, MasterCard, check, or money order acceptable for payment.)

ASSISTANCE

For **assistance** with general agricultural statistics or further information about NASS or its products or services, contact the **Agricultural Statistics Hotline** at **800-727-9540**, 7:30 a.m. to 4:00 p.m. ET, or e-mail: nass@nass.usda.gov.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.
